Module	Key	Plugin name	Translation	Comparison	Date	
configuration	_USERS_ALREADY_ASSIGNED		already assigned users		2020-03-10 17:27:16	✘
configuration	_API_SSO		API and Authentication		2020-03-10 17:27:16	✘
configuration	_ASK_FOR_CODE_MODULE		Ask for a code created through the code module		2020-03-10 17:27:16	✘
configuration	_ASK_FOR_TREE_COURSE_CODE		Ask for a tree code chosen by the user from a list in a dropdown menu		2020-03-10 17:27:16	✘
configuration	_ASK_FOR_DROPDOWN_TREE_CODE		manually by the user		2020-03-10 17:27:16	✘
configuration	_ASK_FOR_MANUAL_TREE_CODE		manually by the user		2020-03-10 17:27:16	✘

In this page you will find a list of all the available translation keys

1. **Filter** the language keys:

- **Module:** the area or feature of the platform where the language key is user
- **Key:** the code placeholder for the language key to be translated
- **Plugin:** select the language keys created by a specific plugin
- **Only untranslated:** shows only keys without local translation

2. **Search** language translations: search any text in all the listed key translations (doesn't search in key names)

3. **Edit** any translation, just by clicking on the translation text

4. **Add** a new translation key for all the available languages

Import language files

import type

import from core import from file

Language

select lang ▾

Overwrite existing words

Do not add missing labels

Import Modes:

- Import from core: select from a list of the available languages
- Import from file: import an XML language file exported from another format installation

Options:

- Overwrite existing words: if the language is already installed in the system, it will override all the customizations
- Do not add missing labels: if the language is already installed in the system and some translation key is missing, it will leave it empty

Add a new language

Create an empty new language
