ACTIONS

Settings

Edit plugin settings, if available

Install

Here you can install or uninstall available plugins

Purge

Completely removes the plugin from the installation

Activate

While installed, a plugin can be activated or deactivated. When deactivated, plugins will be ignored by the system

Priority

In case of conflicts here you can set the load priority for the plugins

Install a new plugin

The steps to add new plugins are:

1. Upload: upload a plugin package directly from your computer. After upload the new plugin will be added to the available plugin list
2. Install: this will actually install the plugin features
3. Activate: to make the plugin features really effective
