

# Event booking

The “Event Booking” module allows teachers and administrators to create a system of physical events in which users can register through the platform.

To configure an event you need to follow simple steps, let's see them together.

To make the organization of the events on the platform clearer and more orderly, it is best to first divide them into **categories**. For example, if there are events relating to “Marketing and Communication” it will be appropriate to create the relevant category and then insert the event within it.

Let's first see how to create a new category.

## Creation of a new category

Go to Administration / Booking Management / Category.

Click on the “Add” button and enter the name of the new category and then click on the “New category” button.

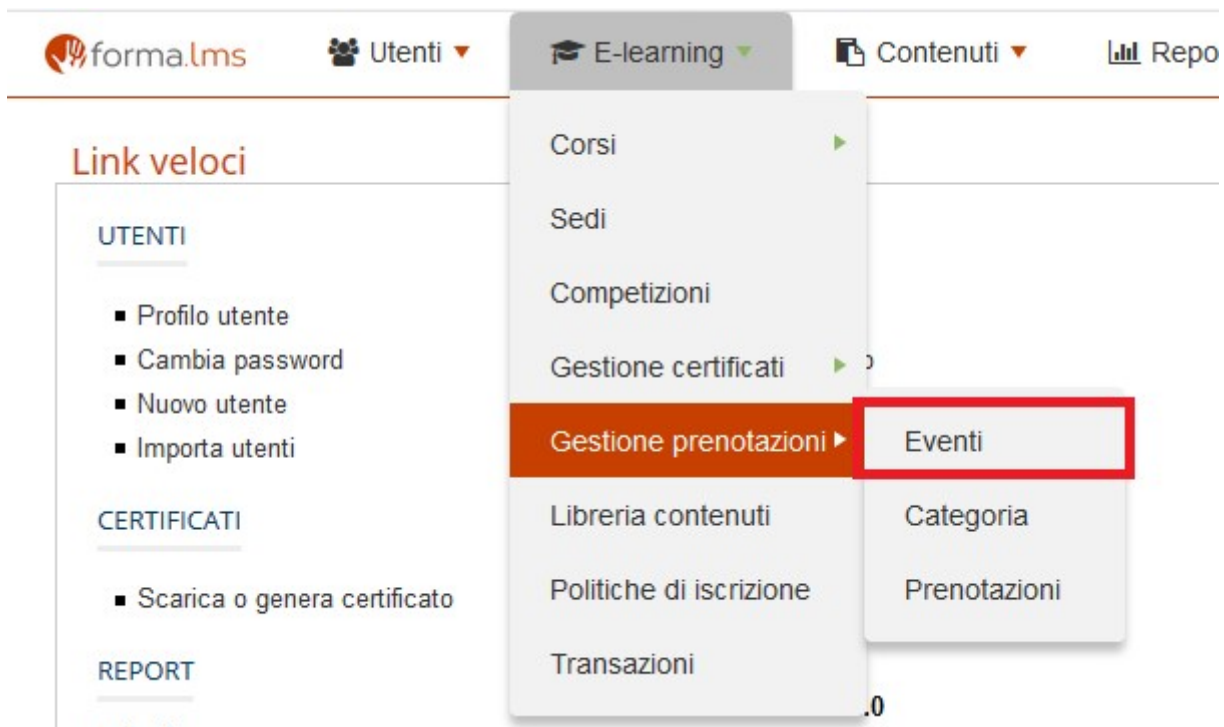

Nuova categoria

Nome	<input type="text" value="Comunicazione e Marketing"/>
Massimo numero di eventi per categoria	<input type="text" value="0"/>

At this point we can proceed with the creation of a new event.

## Creating new event

Go to Administration / Booking Management / Events

Click on the New event button and enter the data relating to:

- Title
- Description
- the course with which the event is associated
- Category
- Start date
- Date by which registration is possible
- Maximum number of participants
- Schedule

Using the active menu for each event, you can:

- assign users who will be able to register for the event;
- modify the data;
- delete the event.

# How to assign users to an event

By clicking on the “Assign users” icon, we can indicate which users can register for that event. We can select them individually or through the “Groups” or through the “Roles”.

In our example, we will insert them individually by putting the check in relation to each user who

can register.

Meeting Comunicazione	12-01-2018	0/10	11-01-2018				

By clicking on the various icons in order, you can:

- check the list of members;
- directly enroll users;
- change the details;
- delete the event.

Attention: if the “Reservations” form is not present in the course menu, it will be impossible for users to register for related events.

Now that we have configured our event on the back end side, let's see how a user can book himself for an event on the front end side.

## Subscribing the user to an event

Following our example, the user must enter the “Effective communication” course with which the event is associated.

We have added the “Reservations” form in the “Social Area” menu item.

Of course, like all menu items, it can be assigned to any section of the course menu.
